

JAXForms Custom Solutions

Custom made form solutions created for you by JAXForms experts. We will build your own JAXForms server adding any requested extensions to the form rendering or workflow process.

What you get:

- JAXForms implements your form-based solution according to your requirements.
- JAXForms creates a proof of concept based on your requirements. Proofs of concept are usually created in 1 or 2 weeks. You can then continue development based on the foundation created by JAXForms.
- In addition to projects and proofs of concept, you can also hire a JAXForms engineer by the hour to troubleshoot particular issues or for smaller engagements.

Benefits:

- Get your solution from the source: the people who built JAXForms.
- JAXForms can create a custom form-based solution in a cost-efficient manner, usually in a matter of weeks.
- JAXForms uses an agile methodology: we like short iterations and to be constantly in contact with the client.
- The solution is based on a JAXForms server, which is entirely written in Java and runs under any J2EE environment.
